

Title: REGIONAL EVENT

Dates & location : 19th February 2008, Madrid, 9:30-14:45h, Premises of PROMOMADRID

Number of Participants: 120

Short description:

The EL-EFF-REGION Regional event had the following Agenda:

- Welcome and start
- Electric Energy Efficiency: basics
- Electric Energy Monitoring and Measure
- High Efficiency Electric Motors
- Performance improvement with variators
- Power factor modification
- EL-EFF-REGION conclusions
- Discussion
- End of day

The main conclusions were:

- The regional event on electric energy efficiency organised by ESCAN, in cooperation with the Reg. Government and the Reg. Energy Agency has been the pioneer in the Region of Madrid
- Even when Madrid imports 97% of the energy consumption, the electric efficiency is still at a low level in our region, and measures to improve it are necessary
- It is needed the inputs from the Government, main associations, energy producers, etc. and work integration to advance in obtaining real results
- The objective would be to reduce every year by 1% the present tendency on energy consumption (as established in the Regional Energy Plan 2004-2012,
- An expert group should be established for EL-EFF targets
- More events on electric energy efficiency will be organise in the following moths

Background:

The *Regional Event* was organised with the aim of presenting the updated information on the progress of the EL-EFF-REGIONS to a bigger group interested stakeholders and updated ideas on electric energy saving, as well as to obtain their feedback through the discussion. Authorities and relevant industries and universities were invited to present some electric energy saving measures, and Francisco Puente presented the updated conclusions gained in the EL-EFF-REGIONS project.
