➤ **Short description:**

The Minister of Innovation, Enterprise and Employment of the Government of Navarra, Jose Maria Roig Aldasoro, opened the presentation event of the measures that the Government of Navarra and the IDAE (Spanish National Institute for the Diversification and Saving of Energy), each one in its ambit, will develop this year 2008 to promote energy saving and efficiency in all areas of the society.

The minister Mr Roig intervened first; who presented the actions undertaken by the Government of Navarra on energy saving and efficiency. Then participated Enrique Jiménez Larrea, general director of IDAE, which exposed the measures of the Spanish National Strategy on Energy Saving and Efficiency for all Spain (E4+).

Following it was realized a presentation of the subsidy calls developed by the General Direction of Enterprise of the Government of Navarra, by its General Director, Begoña Urién.

The aim of this event was to promote the energy saving and efficiency to achieve the objectives proposed on the Strategy E4+ developed by IDAE at Spanish national level and the objectives of the Energy Plan of Navarra horizon 2010, where local authorities of the Government of Navarra presented the measures for energy saving and efficiency for 2008, within of the Action Plan of Navarra 2008-2012.

➤ **Results, follow-up:**

The measures are reflected in several areas. Thus, in the industrial sector will be carried out investments in energy efficiency and energy audits. In the transport sector action plans will materialize in sustainable urban mobility (PMUS), promotion of urban transport in cycling, fleet management of road transport, management audits of transport fleets, setting up of fleet management, driving efficient cars, driving efficient vehicles (buses and trucks), purchase of motorcycles and cars powered by fuels other than gasoline and diesel fuel, transport plans for businesses, and greater participation in collective means of transport by road.

In the area of the building will save energy in existing buildings by improving the system thermal and energy efficiency improvement of the thermal plants, and the organization of training courses on the new energy legislation Building.

For equipment, measures will be taken as the “Plan Renove“ appliances, subsidies to buyers and compensation to the shops.

In the public service sector will be renovated facilities of existing exterior lighting, and carried out studies, feasibility analysis and audits of the lighting.

In the field of energy conversion, will be granted aid to non-industrial cogeneration, will be carried out feasibility studies for cogeneration and energy audits in cogeneration.

Finally, in the field of social awareness on the efficient use of energy, there will be various performances to raise awareness among different social sectors on the importance of efficient use of energy.

In this event were showed some new posters/panels developed in the frame of EL-EFF Region, to present and promote the measures for energy saving and efficiency using different data and graphics.
